

Elderberry roots in Vita mixture

“Bill,

Did we tell you about the elderberry roots in the vita planta mixture? Check out the root system in these pictures. This was one of those “accidents”. The tray is supposed to air prune the roots, but the tray was set on top of a pan that caught the liquid running off the plants. The roots that survived the air pruning took off when they touched the liquid mixture. The pictures are of the same tray and about a month apart. The last 2 were taken only 13 days apart.”
