

October, 2009

The two pictures in the gallery are from an Arizona Golf Course. The comparison of the two are very similar except one is at the end of August and the other at the end of October. The one at the end of August has not been affected from the heat and the alkalinity growing conditions in the Southwest. Vita Agri Plus was injected through the use of a fertilizer injection system. The greens were watered every day and the fairways were done once weekly. There was not one golf course in Arizona that had turf looking like this!

February 10, 2010

We have used Bill Ruth's Vita Agri Plus since mid summer of this past year. We have seen changes in our ability to strengthen the grass in may weak areas of the course. Our rate of application for both greens, tees, and fairways is 1 quart per acre. In conjunction with the application we have reduced the amount of fertilizer used in the past to half of what we have applied in the past. We are pleased with the results and will continue to use the product.
