

**Specialty Potato Farmer in Colorado with the Early & Late Blight-
picture shows leaves from late blight infected leaf samples sent
to Vita's facility in Chandler, AZ**

**Accelerated trials were immediately started after receiving the
samples as the samples were deteriorating rapidly. Three
gallons of Vita were shipped to this potato grower and all three
gallons were able to help the plant fight this disease. This
farmer was the only farmer in this area who did not get the late
blight after this application to his fields. This product was
applied all during the growing season. Additionally, he never
sprayed insecticides for the very first time and had millions of
lady bugs. He had an increase in growth and quality as he had
never seen before.**
